

Cryptography

Big Concepts:

- History of Cryptography
- Number Theory
This lesson uses modular arithmetic to encode/decode messages

Materials:

- Caesar cipher table
(at least one per pair, on next page)
- paper and pencil
(at least 2 paper, 1 pencil per student)
- Three (distinguishable, not super dark) colors of paint, two clear cups, two spoons
(for optional demonstration, picture on next page)

Prep Before Lesson:

- Distribute pencils/papers/cipher tables/inverses mod 26
- (optional) Put equal amounts of Paint Color 1 in both clear cups

Lesson Plan:

:00–:25 *History of Cryptography* Give students background and basic introduction to cryptography, as well as why different ciphers have been used over time. Should include: Caesar (shift) cipher, Vigenere cipher, female codebreakers in WWII. During discussion of Caesar and Vigenere ciphers, teach students how to use shift table (attached) and have them decode messages using it. If time allows, let them encode messages to their neighbors.

:25–:35 *Diffie-Hellman Paint Demonstration (picture on next page)* Lead discussion on why DiffieHellman may be used.

:35–:50 *Affine Cipher* Explain the Affine Cipher and the math behind it. Show students how to use the provided inverse table to encrypt/decrypt messages.

:50–1:00 *Work Time* Allow students to work with a partner to create their own mathematical code.
